

Preparing for Kindergarten

Mathematics

Math is a huge part of our day in Kindergarten. We work on number sense as well as shape identification. We do this through explicit math teaching as well as having plenty of work time building and counting independently.

Below are some ways you can help your child with math concepts throughout the summer!

Have your child sort through various items with you by size, color, or shape. This could be done with objects found around the house like buttons or rocks.

Practice counting to 20. See if your child can count 20 cars that you pass by driving, or point to 20 items at a store.

Practice writing numbers 0-10. Have your child build with legos or blocks. Have them see if they can count the blocks they used, and help them write down the numeral.

Go on a shape hunt and name various shapes such as circles, triangles, squares, rectangles and hexagons.
